6" Series Type "WU" Heat Exchangers "U" Tube Design

DESCRIPTION

B & G Types "WU" Heat Exchangers are of the shell and tube type. The tube bundle is of "U" bend construction with tube ends expanded into a stationary tube sheet. This construction permits ample expansion or contraction for wide temperature variations. A fluid entering the tubes is heated or cooled by a fluid being circulated through a baffled shell. The unit is designed primarily for pumped circulation through the shell.

Standard "WU" Heat Exchangers are constructed according to ASME requirements for pressure and temperatures noted in table on back.

A Manufacturers' Data Report for Pressure Vessels, Form No. U-1, as required by the provisions of the ASME Code Rules, is furnished with each unit upon request. This form is signed by an authorized inspector, holding a national Board Commission, and who is employed by an authorized inspection agency, certifying that construction conforms to the latest ASME code for pressure vessels. The ASME "U" symbol is stamped on each vessel. In addition, each unit is registered with the national Board of Boiler and pressure Vessel Inspectors.

RECOMMENDED "WU" HEAT EXCHANGER

MODEL NO. _____

HEATING SURFACE (SQ. FT.) _____

	TUBE SIDE	SHELL SIDE
1. Fluid Circulated.....	_____	_____
2. Total Flow Expressed in GPM, GRH or lbs./hr.....	_____	_____
3. Temperature In/Out.....	_____ / _____	_____ / _____
4. Transfer BTU/hr.....	_____	_____
5. Pressure Drop.....	_____	_____
6. Fouling Factor or Percentage of Additional Surface.....	_____	_____
Note: Following applies only to fluids other than water		
7. Specific Gravity.....	_____	_____
8. Specific Heat.....	_____	_____
9. Latent Heat.....	_____	_____
10. Viscosity**.....	_____	_____
11. Thermal Conductivity.....	_____	_____

APPROVALS

**Expressed in Proper Units and Temperature such as centipoises @ °F
